SUMMARY

Full-stack developer with 2+ years of experience building scalable microservices in Agile environments. Strong focus on code quality, testing, and system reliability. Experienced in developing containerized applications and familiar with CI/CD pipelines. Background in computer engineering and information system security, with a strong interest in practical problem-solving and continuous learning.

SKILLS

Languages & Web Technologies: Java, Kotlin, Python, JavaScript, C, HTML, CSS

Frameworks & APIs: Spring Boot, FastAPI, RESTful APIs, Node.js, JWT, Angular, Vue.js

Tools & Platforms: Docker, Git, PostgreSQL, Elasticsearch, JUnit, Postman, K6, Jira, CI/CD (Github actions), AWS

EXPERIENCE

Nakisa | Full-Stack Software Developer Intern (Finance project) *Montréal, Canada | Jul 2025 – Nov 2025*

- Built a centralized, multilingual OpenAPI configuration for Java/Spring Boot microservices, enabling inheritance-aware API documentation and eliminating endpoint-level duplication.
- Standardized Vue.js UI components, strengthening frontend consistency and minimizing recurring issues.
- Developed k6 end-to-end load tests for 150+ REST endpoints, simulating 100 concurrent users to ensure system reliability.
- Contributed to Agile/Scrum workflows using Jira and Git, supporting sprint delivery and code quality.

Concordia University | Research assistant *Montréal, Canada | Jan 2023 – Apr 2025*

- Built a smart-home testbed with Node.js apps and real, simulated, and nRF52840-emulated IoT devices.
- Captured and parsed device traffic using Fiddler and Python with custom event-mapping rules.
- Parallelized graph-based model generation, reducing build latency by 72% and improving policy-violation scalability.
- Reduced verification time by 81% and runtime overhead by 56% via proactive, dependency-aware device-state verification.

Institute of Applied Systems of University of Tehran (IAIS) | Software developer *Tehran, Iran | Apr 2019 – Nov 2020*

- Migrated Java-based backend services to Kotlin, refactoring 2,000+ lines of code.
- Built 30+ Spring Boot REST APIs across services using Spring Data JPA (Hibernate), secured with JWT and RBAC.
- Developed a webhook-based Telegram bot with feature parity to the web application, extending system accessibility.
- Validated APIs using JUnit, Postman, and Swagger, and designed PostgreSQL-backed data models for transactional reliability.

PROJECTS

SkillMatch | AI-Powered Resume & Job Matching Platform ([Github Link](#))

- Developed a Spring Boot + FastAPI microservices platform with secure JWT/RBAC authentication.
- Built LLM-powered resume parsing and AI job matching using embedding-based search.
- Integrated Elasticsearch to reduce search latency (3× faster than non-indexed and 20% faster than GIN-indexed PostgreSQL full-text search on a 50K-record dataset)
- Containerized all microservices and managed local orchestration using Docker Compose.

Full-Stack Portfolio Platform ([Github Link](#))

- Built a full-stack portfolio (Angular + Node.js) with dynamic API-driven content and modular backend architecture.
- Improved API performance by up to 30% throughput and 22% lower latency using caching and asynchronous I/O.
- Enabled reliable deployments by containerizing the application and automating delivery via CI/CD pipelines on AWS EC2.

EDUCATION

Master of Applied Information Systems Security *Montréal, Canada | Jan 2023 – May 2025*

Concordia University

GPA: 3.98/4.3

Bachelor's in computer engineering

Tehran, Iran | Aug 2017 - Dec 2021

Amirkabir University of Technology (Polytechnic)

GPA: 17.01/20

CERTIFICATE

- AWS Certified Cloud Practitioner
- Advanced Learning Algorithms

*Udemy | Jan 2026
Coursera | Oct 2022*
